Your enterprise software documentation can only add value if it is accurate, relevant and easy to access. When you publish end user support content, you need a simple and efficient process that encourages peer review, assures quality and speeds delivery.

When your end users hit a roadblock in the middle of a transaction, they need specific help and they need it quickly, because downtime can affect accuracy, productivity, cash flow and customer relationships.

Integrated with Epilogue Author.

Epilogue Publisher is integrated with Epilogue Author, so any edits or updates in Author automatically flow through to all of the outputs in Publisher, ensuring consistency as your content evolves.

Performance Support content creation and delivery to end users.

Tracking documents through their lifecycle is simple with Epilogue Publisher, which gives you a single view of all documents' status, as they move from initial draft, editing, approval and final publishing in the Publisher portal. Once published, end users have instant access to EPS content through Epilogue Advisor for real-time, in-application support.

Centralize and standardize.

Epilogue Publisher provides a single repository that integrates content created in Epilogue Author with content imported from external sources in virtually any format. No need to recreate already existing legacy content, simply import and use the power of Publisher to add

Epilogue Publisher is the workhorse of the Epilogue software platform, enabling a true enterprise ready way to manage your Electronic Performance Support content and software documentation for any size organization, project or team.

Publisher also enables the automatic distribution and enforcement of documentation standards to all content creators using Epilogue Author. You may have 5, 10, 50 or 100 content creators but it will look like you only have one, generating consistent and high quality content.

Electronic Performance Support.

With Epilogue Publisher, EPS content created with Epilogue Author is automatically made context-sensitive to the application and location in that application to which it relates.

Add Epilogue Advisor and Electronic Performance Support content is automatically pushed to end users, notifying them that specific help content exists for where they are working in any Window or Web-based application.

Automated workflow management.

With Epilogue Publisher, authors and approvers can tightly control the flow of Electronic

key properties to imported content to enable context-sensitivity and on-going management and maintenance of all your training, support, help and EPS content.

Powerful monitoring and administration.

Epilogue Publisher provides a comprehensive view of your documentation effort. Dashboards and reports track content creation, review and approval status, end user utilization, reviewer and end-user feedback, user management, and test scores results (which can also be exported to your LMS in a SCORM compliant fashion).

Armed with this insight, you can manage your efforts on a scale never before possible. You can also use the data to identify specific groups, job roles or users for targeted training. Lastly, maintaining software documentation and EPS content can be a nightmare but with Epilogue Publisher, the effort finally becomes manageable.
